EDUCATION

Kalinga Institute of Industrial Technology

Computer Science and Engineering Bachelor of Technology

CGPA: 8.90

Bhubaneswar, Odisha

2024 - 2028

SKILLS

Programming Languages: C, Java, Python, HTML
Libraries/Frameworks: SpringBoot, Numpy, Pandas, Spring, Matplotlib
Tools / Platforms: Git, GitHub, VS Code, Jupyter Notebook
Databases: MySQL, Oracle SQL

PROJECTS / OPEN-SOURCE

Hangman Game | [Link](#)

Java

- Built a command-line Hangman game in Java that loads words dynamically from a file and selects them randomly.
- Implemented game mechanics including guess validation, progressive hangman drawing, and win/loss conditions.
- Applied Java file I/O, collections (ArrayList), and loops to manage gameplay and user interaction.

Bank Account System | [Link](#)

Java

- Built a command-line banking application in Java with features for account creation, transaction handling, and balance management.
- Implemented secure PIN-based authentication and ATM functionalities including deposit, withdrawal, and balance checks.
- Applied object-oriented principles to separate responsibilities across classes and manage account data using Java collections.

Indian Currency Predictor | [Link](#)

TensorFlow, Keras, MobileNetV2, Streamlit, NumPy, Pandas,

Matplotlib

- Developed ML model using MobileNetV2 transfer learning achieving 90-95% accuracy on Indian currency notes (10/20/50/100/200/500) with just 200-600 images per class
- Implemented end-to-end pipeline: data augmentation, MobileNetV2 fine-tuning (5-10 min training vs 15-20 min for scratch CNNs), model evaluation with confusion matrices
- Built production-ready Streamlit web app featuring image upload, real-time predictions, confidence scores, probability distribution charts, and downloadable prediction reports
- Optimized preprocessing pipeline for MobileNetV2 (224x224 images, [-1,1] scaling) with OpenCV/PIL ensuring excellent real-world generalization and fast inference
